PROJECTS

Projects

Covid Tracker: I created using flutter the frontend of a potential covid tracking mobile application.

Personal website: I have a personal website where I share my thoughts, projects and experiences.

Chat Party: I created a web application that matches strangers in one-on-one chat sessions where they can talk anonymously.

OpenVision: a data visualisation web application that shows the countries with the best life conditions.

Rolling Colors: A mobile game I've created using unity. It's an arcade game where you control a ball that has a specific color that changes and you have to stay on the track with the same color as the ball.

EXPERIENCE

Experience

2019

1 June - 30 August
